

P&R Specialty Job Post

Manufacturing Engineer

P&R Specialty, Inc. the leading manufacturer of Plywood Reels, Fiber Spools and Plastic Spools serving the wire and cable industry for 30 years is seeking a Manufacturing Engineer to join their growing team. The Manufacturing Engineer is responsible for continuously improving P&R's manufacturing processes, specifying equipment and troubleshooting technical issues.

Key performance objectives in order of priority are:

1. Achieves established targets for cycle times, product efficiencies and cost reductions through the implementation of continuous improvement initiatives across all business units.
2. Specifies and designs new processes and updated machinery requirements to maximize product flow through the use of automation.
3. Updates and maintains all databases related to product specifications, efficiency and work instructions in order to support all business units and have timely information to measure efficiencies, quality, and opportunities for improvement.
4. Works in conjunction with the production team to identify and resolve all issues related to safety, quality and lean manufacturing processes.

This is a very hands-on position that requires a minimum of five years experience as a manufacturing engineer with a degree in mechanical engineering and practical knowledge of molds, tooling, set up, design, and stamping operations. The successful candidate must have exceptional problem solving ability and a commitment to remaining focused on objectives. This position deals with a large number of details, requires a high level of optimism and the ability to easily move from one task to the next with little to no notice.

P&R Specialty is located in Piqua, OH. Qualified candidates should submit their resume and compensation requirements to talentmatchhr@yahoo.com.
